# Birthday Countdown

Alex, known among friends for organizing memorable surprise parties, wants to plan an unforgettable celebration for his friend's upcoming birthday. To ensure every detail is perfect and nothing is left to the last minute, Alex decides to create a Python script that calculates exactly how many days are left until his friend's birthday. This way, Alex can start planning the party well in advance.

Objective

Write a script named `birthday_countdown.py` that calculates and displays the number of days remaining until your next birthday.

Task

- Prompt the user to enter their birthdate in the format YYYY-MM-DD.
- Calculate how many days are left until their next birthday.
- Print the number of days to the console.

Guidelines

- Use the `datetime` module for handling dates.

Example Usage

```
Enter your birthdate (YYYY-MM-DD): 1990-05-15
Your next birthday is in 30 days.
```

To Submit

Submit your `.py` script.
